Long Story Generation

Example Prompt: *"Write a story about a single mother and child whose car breaks down during a winter road trip in 1982. Show their struggle and unexpected kindness from strangers..."*

Target Length: *8,000-10,000 words*

Long Story: *"December 1982. The Pontiac dies on a Nebraska highway. Mara wraps Jamie's cap straight, breath fogging the glass. Radio fades, heater coughs out. Snow squeaks under boots as headlights approach. She raises one arm, a signal in the frozen dark..."*

Weighted Scoring

Error Type:

- Timeline & Plot Logic
- World-building Setting
- Character
- Factual Consistency
- Narrative Style

Story 1 ------ error-type count: $e1$, length weight: $L1$
Story 2 ------ error-type count: $e2$, length weight: $L2$
...
Story n ------ error-type count: en, length weight: Ln

Length Weight

$$L_i = \log(1 + words_i / L_{median})$$

Pre-story error

$$x_i = L_i \times 1/(1 + \beta \cdot e_i)$$

Overall

$$y = 100 \cdot (\Sigma\, x_i) / (\Sigma\, L_i)$$
